

Here's a simple suggestion that can increase the value you get from this report by threefold:

Print it Out!

That way if you get interrupted while you're reading it, you are more likely to get back to it.

A printout also makes it easier to make notes in the margins and capture the ideas that pop into your head as you read.

And if reading this report is the last thing you do before you go to bed, a printout makes sure the ideas you have while reading it are still there in the morning!

Let's Begin At the Beginning...

In the fall of 2008 the US economy collapsed and to this day nobody is quite sure why it happened.

Sure, there are lots of theories floating around blaming the housing bubble, easy credit, insurance companies, financial institutions, government tax policy, and so on. It may take more than a decade to sort it all out. Frankly, once it has been sorted out and some presidential commission has written a 1,200 page summary of what happened ... it really won't matter. By then, the economy will be different. Our laws will be different. Our way of life will have changed.

If you're one of us baby boomers, this economic disaster might have a bigger impact on you than on any other demographic in our country.

Called by some the “Sandwich Generation,” we are the unfortunate group caught between the responsibility of providing for or assisting our children as they attend college, and caring for our aging parents who may have just lost a hunk of their retirement. Caught in the middle, we’re scrambling trying to prepare for the retirement that we had counted on for ourselves just a few short years down the road.

With an estimated 10,000 baby boomers retiring every day, there are fewer recovery options for those of us that are within five to ten years or retirement. It’s probably more difficult to “go back” and recover our lost retirement portfolios with the career earning time we have left. More and more boomers are delaying their retirement date five years...ten years...or more.

Sounds grim, doesn't it?

Don't Panic!!!

Yes, things are bad financially. Yes, politicians don't have a clue how to solve the problem. Yes, it will get worse before it gets better.

And yes, you have options.

Nobody can predict the future but you can take a greater degree of control of your “now.”

The way we see it, every baby boomer has three critical tasks at hand right now:

1. Get crystal clear about what it will actually take to retire.
2. Determine as best you can what your financial needs will be during your retirement years.
3. Prepare contingency plans in case services like Medicare and Social Security are scaled back.

Once you've done those three critical tasks, you can begin to look more rationally at the options available to you.

Instead of staying on the economic roller coaster controlled by politicians, institutions and organizations, **you have the option to control exactly how much you earn.**

If you have 5 to 10 working years left, I urge you to consider selling your skills on the global market... not limiting yourselves to local employers, local economic conditions, or local networks.

A Different Kind of Boomer

A small but growing group of boomers just like you are embracing a different point of view... where they take charge of their own destinies by improving their earning power.

And for many, the best way to improve their earning power is to sell their skills (both personal and professional) in the global marketplace.

Right now there are over 200 countries in the world – and the state of their economies ranges from good to bad with lots of “so-so” in between.

You can tap into those booming economies without ever having to leave home, if that’s your goal.

But if you decide to move overseas like so many of us have, you can enjoy the extra benefits of a lower cost of living, more affordable health care, and a much deserved change of scenery...all while earning US dollars!

But you don’t have to move overseas to earn a global income.

In this report, I’ll show you five practical ways baby boomers, near-retirees, and expats are earning incomes right now the global marketplace. I’ll lay out each idea and show you its advantages and disadvantages. You’ll be able to evaluate whether you have the necessary skills and abilities – and you might be surprised at how much you already know that’s marketable on a global scale.

While there are certainly many more ways to earn a global living, these five ideas are easy and “do-able” right now. You can use them to start earning an extra income ...or use them as ideas to help you sort out the “next phase” of your life.

As you’re reading, keep an open mind. Jot down your thoughts, ideas, and questions. Use this report to begin taking your life back and determine how to regain control of your own financial well-being.
